### **Overview of the Digestive System | Boundless Anatomy and ...**

The digestive system breaks down nutrients from food and drink into carbohydrates, protein, fats, and vitamins. The functions of digestive system are: Ingestion- taking food in to gastrointestinal tract Propulsion- moves the substances along gastrointestinal tract (peristalsis & segmentation)

### **Anatomy and Physiology of the Digestive System**

The digestive system can be broken down into two major components: There is the primary digestive tract, which functions mainly as a conduit and storage

pathway. This portion is needed in order to move food contents along the tract (peristalsis) so that absorption of nutrients and excretion of undigested substances can occur.

### **Digestive system: Anatomy, organs, functions | Kenhub**

The organs of the digestive system can be separated into two main groups: those forming the alimentary canal and the accessory digestive organs. Organs of the Alimentary Canal The alimentary canal, also called the gastrointestinal tract, is a continuous, hollow muscular tube that winds through the ventral body cavity and is open at both ends.

### **Digestive System Anatomy and Physiology - Nurseslabs**

To achieve the goal of providing energy and nutrients to the body, six major functions take place in the digestive system: Ingestion; Secretion; Mixing and movement; Digestion; Absorption; Excretion; Digestive System Anatomy Mouth. Food begins its journey through the digestive system in the mouth, also known as the oral cavity. Inside the mouth are many accessory organs that aid in the digestion of food—the tongue, teeth, and salivary glands.

### **Free Anatomy Quiz - Quizzes on the Digestive System**

Digestive The human digestive system is the means by which tissues and organs receive nutrients to function. The system breaks down food, extracts nutrients from it, and converts them into energy....

### **Digestive System Anatomy, Area, and Diagram | Body Maps**

The mouth is the beginning of the digestive tract. In fact, digestion starts here as soon as you take the first bite of a meal. Chewing breaks the food into pieces that are more easily digested,...

### **Digestive System (Anatomy): How It Works**

The GI tract is a series of hollow organs joined in a long, twisting tube from the mouth to the anus. The hollow organs that make up the GI tract are the mouth, esophagus, stomach, small intestine, large intestine, and anus. The liver, pancreas, and gallbladder are the solid organs of the digestive system. The small intestine has three parts.

### **Your Digestive System & How it Works | NIDDK**

The liver lies under the lower right rib cage and occupies much of the upper right quadrant of the abdomen, with a portion extending into the upper left quadrant. The organ weighs from 1.2 to 1.6 kg (2.6 to 3.5 pounds) and is somewhat larger in men than in women.
