Animal Architects examines animal architecture across a range of species, from those whose blueprints are largely innate (such as spiders and their webs) to those whose challenging structures seem to require intellectual insight, planning, and even aesthetics (such as bowerbirds' nests, or beavers' dams). Beginning with instinct and the simple homes of solitary insects, James and Carol Gould move on to conditioning; the "cognitive map" and how it evolved; and the role of planning and insight.

Animal Architects And The Beautiful Homes They Build Lina D. BoredPanda staff Most animals are content with finding a slightly softer and more sheltered space to sleep for the night, but there also wild animals out there that demand nothing but the finest accommodations.

Animal Architects And The Beautiful Homes They Build ...

The ants, too, are some of the best animal architects, capable of building elaborate ant colonies underground, without a blueprint or any light, and display amazing skill in gauging depth from the surface. Gophers and prairie dogs build burrows that are actually called towns, since they spread across hundreds of acres, housing thousands of rodents.

10 Best Animal Architects and Their Constructions

Construction behaviour occurs across the entire spectrum of the animal kingdom and affects the survival of both builders and other organisms associated with them. This book provides a comprehensive overview of the biology of animal building. It recognizes three broad categories of built structure: homes, traps, and courtship displays. Even though some of these structures are complex and very ...

Animal Architecture - Oxford Scholarship

Built by animals, often called animal architecture, abound in nature. Examples include termite mounds, wasp and beehives, burrow complexes of rodents, beaver dams, elaborate nests of birds, and webs of spiders. Often, these structures incorporate sophisticated features such as temperature regulation, traps, bait, ventilation, special-purpose chambers and many other features. They may be created by individuals or complex societies of social animals with different forms carrying out spe

Structures built by animals - Wikipedia

Beaversmight be the most well-known animal architects, and with good reason. These prolific builders fell trees and gather sticks and mud to construct dams, which create ponds that offer predator protection and easy access to food during the winter. A beaver drags a log at a pond in Denali National Park and Preserve in Alaska.
