Key Points. The Pythagorean Theorem, $a2 + b2 = c2$, $a2 + b2 = c2$, is used to find the length of any side of a right triangle. In a right triangle, one of the angles has a value of 90 degrees. The longest side of a right triangle is called the hypotenuse, and it is the side that is opposite the 90 degree angle.

Trigonometry and Right Triangles | Boundless Algebra

An equilateral triangle with side lengths of 2 cm can be used to calculate accurate values for the trigonometric ratios of 30° and 60°. The equilateral triangle can be split into two right-angled...

Special Right Triangles. 30°-60°-90° triangle: The 30°-60°-90° refers to the angle measurements in degrees of this type of special right triangle. In this type of right triangle, the sides corresponding to the angles 30°-60°-90° follow a ratio of 1:√ 3:2. Thus, in this type of triangle, if the length of one side and the side's corresponding angle is known, the length of the other sides can be determined using the above ratio.

Right Triangle Calculator
Step 1 The two sides we know are A djacent (6,750) and H ypotenuse (8,100). Step 2 SOH CAH TOA tells us we must use C osine. Step 3 Calculate Adjacent / Hypotenuse = 6,750/8,100 = 0.8333. Step 4 Find the angle from your calculator using cos-1 of 0.8333: cos a° = 6,750/8,100 = 0.8333.
