### ASTM E90 - 09(2016) Standard Test Method for Laboratory ...

ASTM E90. Standard: ASTM E90: Standard Test Method for Laboratory Measurement of Airborne Sound Transmission Loss of Building Partitions and Elements. Certification Required: Acoustical certification is currently not required by building codes, however the STC rating is required by the IBC and IRC codes for demising walls and floor-ceiling assemblies in multi-family dwellings.

### ASTM E90 - Intertek

ASTM E90. Significance and Use. 5.1 Sound transmission loss as defined in Terminology C634, refers to the response of specimens exposed to a diffuse incident sound field, and this is the test condition approached by this laboratory test method. The test results are therefore most directly relevant to the performance of similar specimens exposed to similar sound fields. They provide, however, a ...

### ASTM E90 - 09(2016) Standard Test Method for Laboratory ...

Sound transmission through the filler wall is within correction limits established in ASTM E90. † Actual transmission loss of specimen may be higher than measured at this frequency band. Sound transmission through the filler wall exceeds correction limits established in ASTM E90; therefore the result is "an estimate of the lower limit".

### ASTM E 90-09: Laboratory Measurement of Airborne Sound ...

ASTM E90 is used in product development when acoustic issues such as sound isolation or sound reduction are a concern and/or selling point. An STC rating can be used to ensure compliance with a building code or other third-party requirements, and as a marketing tool to establish a competitive edge. Building Materials / Research and Development
