Step 1, Look at the stereo system you are installing your new speakers on. Some systems are simple stereo audio systems that have limited wattage and two or four channels, so 100 watt speakers, or adding 8 or more just won't make sense. Trying to push too many speakers can, in fact, cause the quality of the audio to be diminished, or even damage the stereo. Step 2, Check the dimensions of the existing speakers so minimum modifications will be needed to fit the new ones in. Speakers come in ...

~~How to Install Car Speakers (with Pictures) — wikiHow~~

Identifying car stereo wires might seem intimidating, but in truth, figuring out the purpose of each wire in a factory car stereo wiring harness is actually pretty easy. You can either track down a wiring diagram for that specific make, model, and year, or you can grab an inexpensive multimeter, which is an essential tool for DIY car stereo wiring projects , and an AA battery, and figure it ...

~~Car Stereo Wiring Color and Identification Basics~~

Wiring of stereo speakers varies from car to car. The type of wiring depends on mounting depth and height and speaker location too. Some installations might be plain sailing where only a screwdriver might be necessary. However some installations might not be that simple, especially in the case of component speakers.

The power wire from your amp wiring kit (usually 16-20 feet in length) needs to run from the battery, through your car's firewall, through the car's body to the amp. Find an unused grommet in the firewall or one that already has wires or cables passing through it and that has enough room for the power wire to fit through too.
