This digital teacher's guide is intended for use with Carolina Investigations® for AP® Biology: Origin of Life Kit (items #747500 and #747501). This laboratory activity addresses AP® Biology Big Idea 1 and Essential Knowledge 1.D.1 and 1.D.2. Using kit materials, students explore the origin of life by creating coacervates—phospholipid vesicles similar to those created in the laboratory by Alexander Oparin in the 1920s.

By Shad Olson. January 13, 2020. 77689. Emerging evidence strongly suggests a research collaboration between a North Carolina scientist and two Wuhan, Chinese microbiologists is the smoking gun in the creation and release of the COVID-19 superbug. A coronavirus synthesized in two laboratories on opposite sides of the world into a chimera viral monstrosity, optimized for infectious spread and with a lethality 20 times that of the common influenza.

In evolutionary biology, abiogenesis, or informally the origin of life (OoL), is the natural process by which life has arisen from non-living matter, such as simple organic compounds. While the details of this process are still unknown, the prevailing scientific hypothesis is that the transition from non-living to living entities was not a single event, but an evolutionary process of ...
