Chapter 11 Urinary System. STUDY. PLAY. urinary system, plays an important role in maintaining homeostasis by constantly filtering the blood to remove urea and other waste products, maintaining the proper balance of water, salts, and other substances by removing or reabsorbing them as needed.

Chapter 11 Urinary System Flashcards | Quizlet
The urinary system includes the kidneys, renal pelvis, ureters, urinary bladder, and urethra. The kidney filters the blood at the glomerulus, reabsorbs and secretes solutes and fluid in the renal tubules, and concentrates the urine in the medullary collecting ducts. Urine passes down the ureters to the bladder by gravity and peristalsis filling the urinary bladder.

excessive urea in the blood. urinary system, consists of the kidneys, ureters, bladder, and urethra. kidneys, filtering urea and other waste products from the blood - maintain proper balance of water and electrolytes - involved in control of blood pressure - regulates red blood cells - activate vitamin D. renin.

Chapter 11 - Urinary System Foreign Language Flashcards ...
The urinary system has roles you may be well aware of: cleansing the blood and ridding the body of wastes probably come to mind. However, there are additional, equally important functions played by the system. Take for example, regulation of pH, a function shared with the lungs and the buffers in the blood. Additionally, the regulation of blood pressure is a role shared with the heart and blood vessels.
