Chapter 13 Normal Labor And Delivery | www.sprun

Summary of Normal Labor Labor is characterized by brevity and considerable biological variation. Active labor can be reliably diagnosed when cervical dilatation is 3 cm or more in the presence of uterine contractions. Once this cervical dilatation threshold is reached, normal progression to delivery can be expected, depending on parity, in the ensuing 4 to 6 hours. Anticipated progress during a 1- to 2-hour second stage is monitored to ensure fetal safety.

Normal Labor & Delivery - SlideShare

In a non-union environment, the employer makes largely unilateral, i.e., one-sided decisions on issues affecting its labor force, such as salary and benefits. Typically, employees are in no position to bargain for better deals. At the same time, however, employers have a vested interest in treating workers fairly.

Chapter 13 Union/Management Issues – Fundamentals of Business

An ideal labor is one in which the woman's bony pelvis is adequate, the fetus is of average size, and the strength of the uterine contractions increases sufficiently to cause the cervix to fully efface and dilate.
