*Constant-Current 3 ...*

We want to set our constant current source to 1 amp and we have connected a load of 1 ohm across the output.

If 1 amp flows through the circuit, then we should expect to see a

# Access Free Constant

voltage of 0.1V across the 0.1-ohm resistor and so, therefore, we tune the potentiometer such that a voltage of 0.1V is fed into the positive terminal of U1A.

*Constant-Current 3 ...*

The Dynamic PWM is no longer a constant current PWM. It is smarter than that.

Actually it is changing the amps drawing to the dry cell dynamically depending on the RPM's of the engine. It will adjust the HHO output to match the needs of the engine.
