object as you draw it, drag in the drawing window until the snap point in the target object becomes highlighted. To set snapping options. 1. Click ToolsOptions.

*CorelDRAW Help |*

*Snapping objects*

There is a known bug (think it was discussed some weeks ago) where if a group is selected,

# Access Free Corel Draw

only the topmost object in the group snaps to the guidelines. If the same objects are selected but not grouped however, only the object at the bottom of the stack snaps to the guidelines. Maybe this is what you are seeing? 0 Tracey over 1 year ago

## Corel Draw

drawing. You can snap an object to a number of snap points in the target object. When the pointer is close to a snap point, the snap point is highlighted, indicating it as the pointer's snapping target. To snap an object to another object with greater precision, you first snap the pointer to a snap point in the object, and

Unfortunately the "snap-to-itself" function can not be turned off in Draw, I think it should be. Anyway, two simple ways to get around it: 1. Temporarily disable guideline snapping, just as Myron and Eskimo said. You can also

# Access Free Corel Draw

assign a shortcut key to this command, if this is something you do a lot.

2.
