## Observations Dark Matter

### Dark

Dark matter is a form of matter thought to account for approximately 85% of the matter in the universe and about a quarter of its total mass-energy density or about  $2.241 \times 10^{-27}$  kg/m<sup>3</sup>. Its presence is implied in a variety of

The existence of a vast amount of dark matter (DM) in the Universe is supported by many astrophysical and cosmological observations. The latest measurements indicate that approximately a 27% of the Universe energy density is in form of a new type of non-baryonic cold DM.
