Overview R is a free software environment for statistical computing and graphics. It is what's known as 'open source', which means that unlike commercial software companies that protectively hide away the code on which their software is based, the people who developed R allow everyone to access their code. This open source philosophy allows anyone,...

Developed at the University of Amsterdam (thanks to funding from the ERC grant "Bayes or Bust!" from the European Union). It has less features than SPSS and R, but has many advantages. With respect to R, it is more user-friendly in that it offers a nice user-interface and real-time updating of output.
