A set X is a subset of set Y (Written as $X \subseteq Y$) if every element of X is an element of set Y . Example 1 \square Let, $X = \{1, 2, 3, 4, 5, 6\}$ and $Y = \{1, 2\}$. Here set Y is a subset of set X as all the elements of set Y is in set X . Hence, we can write $Y \subseteq X$.

272 5 An Introduction to Discrete Probability If we assume in Example 5.2, that our dice are "fair," namely that each of the six possibilities for a particular dice has probability $1/6$, then each of the 36 rolls W has probability $\Pr(w) = 1/36$. We can also consider "loaded dice" in which there is a different distribution of probabilities.
