The Drought In The Western U.S. Is Getting Bad. Climate Change Is Making It Worse

Climate change is causing extreme drought periods and displaces global precipitation. While some regions benefit from more rain, places like southern California struggle to maintain their agricultural ...

How Solar Can Solve the World's Clean Water Crisis

The visible surface of the Sun, or the photosphere, is around 6,000°C. But a few thousand kilometers above it – a small distance when we consider the size of the Sun – the solar atmosphere, also ...

Why the Sun's Atmosphere Is Hundreds of Times Hotter Than Its Surface – 80 Year-Old Theory Finally Confirmed

The corona is hotter than the photosphere, despite being further from the Sun's core. This has led to much head-scratching in the scientific community.

The Sun's atmosphere is way, WAY hotter than its surface – here's why

There are two major ways that the land loses water to the atmosphere: (1) direct evaporation from soil and (2) through transpiration, the biological process by which living plants move water through ...

Collaborative Research: Ecophysiological controls on evapotranspiration across a semiarid elevation gradient

Aside from providing clean energy, harnessing evaporation in this way could also help regions affected by drought. As much as half of the water that evaporates into the atmosphere could be saved ...

Evaporation-Harvested Energy Could Meet 70% of the United States' Power Needs

Some of the oxygen produced is used in respiration through evaporation, into the atmosphere. That beneficial loss of water from plants is called transpiration. A fully grown tree may lose several ...
