Fluids And Pressure

Answers Fluid pressure has no direction, being a scalar quantity, whereas the forces due to pressure have well-defined directions: They are always exerted perpendicular to any surface. The reason is that fluids cannot withstand or exert shearing forces. Thus, in a static fluid enclosed in

Pressure at a point
inside the liquid

Acces PDF Fluids And

Pressure increases with the depth from its free surface. In a stationary liquid, pressure is same at all points on a horizontal plane. Pressure is same in all directions about a point in the liquid. Pressure at same depth is different in different liquids. It increases with the increase in the density of liquid.
