From Mental Imagery to Spatial Cognition and Language

Spatial imagery is imagery of spatial relationships. If I ask you to imagine the room in which you spend most of your time awake if you produce a picture of this in your mind it is spatial imagery, particularly if it is a three dimensional mental representation. This idea is related to that of cognitive maps, cognitive control

Spatial imagery | Psychology Wiki | Fandom

Mental imagery, then, can be defined as experience resembling perceptual or motor experience occurring in the absence of the relevant external stimuli, in the case of perceptual experience; or without actual execution of motor actions, in the case of motor imagery. Imagery has played a critical role in most theories of mind, starting at least as early as Aristotle. Modern investigations of ...

Spatial and Linguistic Aspects of Visual Imagery in ...

Research on mental imagery established a distinction between mental imagery for reproductive images (i.e. evoking images for objects or events that are already known) and transformed images (i.e. evoking images for events that have previously not been perceived, including movements and transformations of previously

Mental Imagery (Stanford Encyclopedia of Philosophy)

What is the relation between imagery and spatial representation?

What can we do with mental imagery? This essay will focus on visual imagery, because we know more about visual imagery than auditory, haptic, gustatory, or olfactory imagery. The expectation is that many principles, although not all details, of emerging theory will be applicable to imagery in other modes.

mental imagery and spatial cognition Flashcards | Quizlet

Mental imagery is similar to motor imagery, but instead of imagining motions, the user performs different types of cognitive activities: mental subtraction, auditory imagery, spatial navigation, etc. (Friedrich et al., 2012) As the frequency distribution of the EEG changes depending on the user's mental workload (Herrmann et al., 2004; Antonenko et al., 2010), BCIs can use this information to determine whether or not the user is performing a certain cognitive activity.
