### ~~EE2 Signals and Linear Systems—Imperial College London~~

The basic concepts of Fourier series, Fourier transforms, Laplace transforms and related areas are developed. The idea of convolution for linear time-variant systems are introduced and expanded on from a range of perspectives. The transfer function for continuous and discrete tiem systems is used in this context.

I have several of Lathi's texts and I have been a 'fan' for years. This text is quite comprehensive, presented at the 'junior' level in Lathi's inimitable style. I like the integrated approach to continuous and discrete time systems. In my opinion this is the best way to present 'signals' material in today's world of technology.
