altering one or more of these requirements.

~~Causes and Control of Wood Decay, Degradation & Stain~~

Wood Decay Wood decay (wood rot) is decomposition of wood by microorganisms, primarily by enzymatic activity. For practical purposes, fungi are the only agents of wood decay. There are other kinds of deterioration, by insects, marine animals, ultraviolet light, etc., but this is not decay, nor is it quantitatively as important as decay.

~~Wood Decay in Trees | Forest Pathology~~

It requires rather constant conditions of temperature and humidity for its growth and thrives best in unventilated places where the air is quite still. Wood decayed by the fungus is pale brown in colour, and becomes broken up into large brick shaped pieces as it dries and shrinks. The decayed wood is easily crumbled to powder between the fingers.
