Main engine troubleshooting—Why does the engine not—:

A basic diesel engine needs only a constant supply of clean fuel, plus air to provide oxygen for combustion. The amount of air needed is easy to under estimate – around one cubic metre per minute is required for every 10hp of engine power. Defective engine compartment ventilation, or clogged air filters, can therefore result in a loss of power.

Lack of throttling losses. Another reason for better diesel efficiency is the lack of throttling losses. Petrol engines need to maintain a correct air-fuel ratio. Burning fuel inside an engine is a chemical reaction and the ingredients for optimal combustion are 14.7 grams of air and 1 gram of petrol.

The Problem with Modern Diesel Engines—Still Running Strong

A runaway diesel running on the engine ' s crankcase oil will run until the engine oil is depleted and the engine seizes due to lack of lubrication. The only way to shut down an engine in this situation is to block the air supply needed for combustion.
