In photographic terms it means the same thing: the aperture is the opening in the lens through which light passes. Inside a camera lens are aperture blades, which comprise the lens diaphragm. When you turn the aperture ring on a lens (if it has one) or adjust the aperture dial on a camera, these blades iris open or

look as clean as a photo taken at ISO 100, you can use Lightroom noise reduction to clean up your high ISO images.

Mastering noise reduction in Lightroom involves a few tradeoffs.

But it's a great solution for people who need the flexibility of shooting at high ISO values while still getting great results.
