Periodic Trends Quiz 1. From which of the following is it easiest to remove an electron? a. Mg b. Na c. Al d. S Answer: Na --It ' s the biggest 2. Which of the following influenced your answer to number one the most? a. nuclear charge (number of protons) b. valence electrons c. inner shell electrons d. shielding effect

Periodic Trends Quiz - howechem.net

Describe the trends in electron configuration in the periodic table by selecting the terms from the drop-down menus. The number of valence electrons ___1___ from the left to right across a period. The number of valence electrons ___2___ from the top to the bottom of a group. Electrons are added into the outermost ___3___ in Groups 1 and 2.

Periodic Trends Flashcards | Quizlet

Unit 8 Quiz--Periodic Trends: Multiple Choice (Choose the best answer.) Which of the following is NOT a trend that varies systematically in the periodic table? electronegativity. symbols of elements. ionization energy. atomic radius. ionic radius. The atomic radius of F, Br, and I are 64, 114, and 138 pm respectively. From this information (and ...

Unit 8 Quiz--Periodic Trends - Thurston High School

answer choices. Atomic radii decrease from left to right across a period and decrease from top to bottom in a group. Atomic radii increase from left to right across a period and increase from top to bottom in a group. Atomic radii decrease from left to right across a period and increase from top to bottom in a group.
