If the hotter parts can be removed without disturbing the rest of the engine, for example without removing the complete engine from the aircraft, maintenance costs are reduced. It was achieved with the PT6 by having the hottest parts, the gas generator turbine and combustor, at the propeller end. They are removed without

## Maintenance

The design mandate for the PT6A was to create a compact, lightweight, modular engine that could produce 500shp, and be serviced as much as possible ‘on-wing’ without removal. The PWC team collaborated on a double-shaft, reverse flow, free-turbine design which produced more power than a fixed shaft engine, was
