Single-shot reliability is specified as a probability of one-time success or is subsumed into a related parameter. Single-shot missile reliability may be specified as a requirement for the probability of a hit. For such systems, the probability of failure on demand (PFD) is the reliability measure — this is actually an "unavailability" number. The PFD is derived from failure rate (a frequency of occurrence) and mission time for non-repairable systems.

~~Reliability engineering — Wikipedia~~

Reliability evaluation of past data has indicated failures in missile structural, energetic, and electronic components associated with the long-term exposure to heat, humidity, and transportation shocks. Unlike strategic missiles, tactical missiles undergo a very minimum of field checks and non-destructive evaluation on a routine basis.

Engineers analyzing reliability typically carry out reliability predictions, FMEA or FMECA, design testing programs, monitor and analyze field failures, and suggest design or manufacturing changes. The overall goal of reliability engineering is to make your product more reliable in order to reduce repairs, lower costs, and maintain your company's reputation.

But the multiple test failures and a harsh review by an independent group commissioned last year by MDA have spurred a drive to restructure a seven-year Boeing contract that began in 2011, and the initial contract it has held since 2001, according to sources briefed on the review. The aim is to beef up the system's quality and reliability.
