r, and $l(l + 1) \approx m^2 \pm 1/4$, which is to say, $l^2 + l + 1/4 = m^2$, or $(l + 1/2)^2 = m^2$, or $l = |m| \pm 1/2$. [Our present equation depends only on m^2 , and

hence is the same for either sign, but the solution to Problem 4.39 assumed $l + 1/2 \neq 0$ (else u is not normalizable), so we need $|m|$ here.]

Quoting 4.39: $E = (j$.

This innovative new text approaches Quantum Mechanics in a manner more closely aligned with the methods used in real modern physics research. Most texts start with a bit of history and then move directly to wave-particle problems with the incumbent heavy mathematical analysis; McIntyre, Manogue, and Tate aim to ground the student's knowledge in experimental phenomena and use a more approachable, less intimidating, more powerful mathematical matrix model.
