Megapixel size. That kind of thing. The confused question often then also hinges on which image resolution should you use? 72 dpi or 300 dpi? (Or also, 72 ppi vs 300 ppi.) It is a topic that has been discussed here before: Image size & Resolution - 72 dpi or 300 dpi

Which image resolution - 72 dpi or 300 dpi? - Tangents

Now, the resolution is expressed in dpi (or ppi), which is the acronym for dots (or pixels) per inch. So, if you see 72 dpi it means that the image will have 72 pixels per inch; if you see 300 dpi means 300 pixels per inch, and so on. The final size of your image depends on the resolution that you choose. If an image is 4500 x 3000 pixels it means that it will print at 15 x 10 inches if you set the resolution to 300 dpi, but it will be 62.5 x 41.6 inches at 72 dpi.

Every printer will specify a necessary resolution for print jobs - 300 DPI is a typical resolution for paper printing. It is important for your final project to meet DPI specifications so that the printer does not enlarge or shrink your design, which could alter the look and quality of the final product.

DPI vs. Pixels: What Do I Use? | Design Shack

As we said in the prior paragraph, the image resolution is calculated in DPI or dots per inch. If you don't know this already, each digital image consists of a number of dots or as we call it, pixels. For example, a 1024 pixels x 680 pixels image consists of 1024 dots on the long side and 680 on the short side. This is one side of the story.
