Series-Parallel Circuit Analysis: Practice Problems ...
An open-circuit in one branch of a series-parallel circuit usually alters the current levels in several branches of the circuit. In the case of an open-circuit at one end of the parallel resistors, as shown in figure 7, I2 goes to zero. The current through R1 and R2 is now equal to the supply current and is calculated as

Series And Parallel Circuits Problems Answers
The most common problems I encounter as an electronics instructor with reference to series-parallel are invariably related to students' lack of ability to consistently distinguish series sub-networks and parallel sub-networks in series-parallel combination circuits.

One problem I've encountered while teaching the llaws of parallel circuits is that some students mistakenly think the rule of llall voltages in a parallel circuit being the same ll means that the amount of voltage in a parallel circuit is fixed over time and cannot change.

Here in the parallel circuit, however, the opposite is true: we say that the individual resistances diminish rather than add to make the total. This principle completes our triad of llrules ll for parallel circuits, just as series circuits were found to have three rules for voltage, current, and resistance.

Simple Parallel Circuits | Series And Parallel Circuits ...
Resistor circuits that combine series and parallel resistors networks together are generally known as Resistor Combination or mixed resistor circuits. The method of calculating the circuits equivalent resistance is the same as that for any individual series or parallel circuit and hopefully we now know that resistors in series carry exactly the same current and that resistors in parallel have ...

Resistors in Series and Parallel Resistor Combinations
The downside to this scheme is that the parallel currents can add up to dangerously high levels. A circuit breaker in series before the parallel branches can prevent overloads by automatically opening the circuit. A 15 A circuit operating at 120 V consumes 1,800 W of total power. P = VI = (120 V) (15 A) = 1,800 W.
