Tuning a servo system involves adjusting

# Download Ebook Servo Tuning Ac

the gains in the motion controller to minimize the servo system ' s response time, settling time, and overshoot. The goal of servo tuning is to minimize (but not necessarily eliminate) the error between the commanded position (or speed or torque) and the actual value achieved.

# Download Ebook Servo Tuning Ac

What is servo tuning and why is it important?

Servo Tuning Servos are closed loop devices. They operate by comparing the position they're supposed to be at with the position their encoder says they actually are at and applying current to the servo motor until the two match.

Servo Tuning Tutorial - [vdwalle.com](http://vdwalle.com)  
Scales introduce several variables into servo tuning. The motor encoder is used to control the velocity loop and the scale is used to control the positioning loop. There is always a lag between the motor encoder feedback and the scale feedback. That lag
