Urinary Sheep Kidney Labeled | Virtual Anatomy Lab

The nephrons, numbering about 400,000 in each sheep kidney, are too small to see on your dissection specimen. However, you will be able to see and label the larger connective tissue structures. Because the kidney's job is to filter the blood, producing tubular filtrate and urine, some of the "structures" will be open spaces (such as renal ...

KIDNEY DISSECTION Abstract The purpose of the experiment is to dissect a sheep kidney so that a better understanding of the structure and function of the kidneys will develop. In this experiment a kidney was observed exteriorly, then a frontal coronal cut was made in order to reveal the inner workings of the kidney. The structure of the inside was also observed.
