In mathematics, a solution set is the set of values that satisfy a given set of equations or inequalities. For example, for a set $\{f_i\}$ of polynomials over a ring R , the solution set is the subset of R on which the polynomials all vanish, formally $\{x \in R: \forall i \in I, f_i = 0\}$. The solution set for an equation is the set of all numbers that when used in the place of the variable makes the equation a true statement. For example, the equation $x - 6 = 4$ has a solution 10. When $x = 10$, the equation becomes the true statement. Solution Sets for Equations The set containing all the solutions of an equation is called the solution set for that equation.

A solution set is the set of all variables that makes the equation true. The solution set of $2y + 6 = 14$ is $\{4\}$, because $2(4) + 6 = 14$. The solution set of $y^2 + 6 = 5y$ is $\{2, 3\}$ because $2^2 + 6 = 5(2)$ and $3^2 + 6 = 5(3)$. If an equation has no solutions, its solution set is the empty set or null set—a set with no members, denoted \emptyset . For example, the solution set to $x^2 = -9$ is \emptyset , because no number, when squared, is equal to a negative number. Information Source: www.math-only-math.com

In solution set notation we say that the solution set is empty and denote it with the symbol \emptyset . This symbol is often called the empty set. We now need to make a couple of final comments before leaving this section. In the above discussion of empty sets we assumed that we were only looking for real solutions.
