In partial differential equations, developing techniques are frequently more important than general theorems. Partial differential equations, a nonlinear heat equation, played a central role in the recent proof of the Poincaré conjecture which concerns characterizing the sphere, S^3 , topologically.

Find the partial differential equations are ψ and S . Solution 9. Since $\psi_t = \psi_{xx}$ and $S_t = S_{xx}$ we obtain the coupled system of partial differential equations $\psi_t + \psi_{xx} = 0$ and $S_t + S_{xx} = 1 - m(\psi - 2m)\psi^2 + rV$: This is the Madelung representation of the Schrödinger equation.
