The Black Death was a bubonic plague pandemic, which reached England in June 1348. It was the first and most severe manifestation of the Second Pandemic, caused by *Yersinia pestis* bacteria. The term Black Death was not used until the late 17th century. Originating in Asia, it spread west along the trade routes across Europe and arrived on the British Isles from the English province of Gascony. The plague was spread by flea-infected rats, as well as individuals who had been infected on the continent.

Black Death in England - Wikipedia

The Great Plague 1665 – the Black Death. In two successive years of the 17th century London suffered two terrible disasters. In the spring and summer of 1665 an outbreak of Bubonic Plague spread from parish to parish until thousands had died and the huge pits dug to receive the bodies were full.

The Great Plague 1665 - the Black Death - Historic UK

The Black Death of 1348-49 may have killed more than 50% of the European population. This book examines the impact of this appalling disaster on England's most populous city, London. Using previously untapped documentary sources alongside archaeological evidence, a remarkably detailed picture emerges of the arrival, duration and public response to this epidemic and subsequent fourteenth-century outbreaks.

The Black Death in London: Amazon.co.uk: Sloane, Barney ...

There have been various incidences of the plague in London over the centuries. The first, and worst outbreak of the Black Death was between 1348 and 1350. Bristol was struck first, as the pestilence arrived on a ship that docked at the port. Once it arrived in London it quickly spread throughout the city.

The Black Death - All In London

In 1348, the Black Death arrived in England, probably carried by an infected sailor arriving at the port of Melcombe, modern day Weymouth. By the November of that year the disease – what we know now as Bubonic Plague – had reached London, with devastating effect. The whole of society and the routines of daily life were turned upside down.

How Croydon 's pandemic priests survived the Black Death ...

LONDON SUFFERED the plague for nine months, from the beginning of November 1348 to the end of July 1349, with some less convincing evidence of spikes of mortality through to March 1350. The evidence presented provides a monthly snapshot of the developing plague, but an overview of the anatomy of the disaster is also to some extent possible.

THE GREAT MORTALITY - The Black Death in London

The Great Plague of London, lasting from 1665 to 1666, was the last major epidemic of the bubonic plague to occur in England. It happened within the centuries-long Second Pandemic, a period of intermittent bubonic plague epidemics which originated from Central Asia in 1331, the first year of the Black Death, an outbreak which included other forms such as pneumonic plague, and lasted until 1750. The Great Plague killed an estimated 100,000 people—almost a quarter of London's population—in ...

The Black Death in London by Barney Sloane

Another argument against the Black Death having been bubonic plague is that it began to spike in London in the winter of 1348-9, when the rat flea (*Xenopsylla cheopis*) that transmits this strain of the disease would have been inactive, as it is everywhere today at temperatures of less than 10degC.
