Books like touching a nerve are difficult to find. It touches on a hard-

to-access topic, full of technical jargon and many sensitive issues

and yet, manages to be surprisingly comprehensible, highly

educative on a wide range of topics, respectful on delicate matters

and all in all a very entertaining read. The main subject is the

science of the brain and how the three-pound mass of jelly (as

Ramachandran likes to put it) was engineered by evolution and how

it makes us who we are. Patricia Churchland

Touching a Nerve | Patricia Churchland | W. W. Norton ...

The nerve endings are remarkably sensitive. They can be triggered by the slightest movement of the hairs. Signals from touch receptors pass via sensory nerves to the spinal cord, where they synapse, or make contact with, other nerve cells, which in turn send the information to the thalamus and sensory cortex.

Touching a Nerve: The Self as Brain

The olfactory nerve transmits sensory information to your brain regarding smells that you encounter. When you inhale aromatic molecules, they dissolve in a moist lining at the roof of your nasal...

12 Cranial Nerves: Nerves, Functions & Diagram of Locations

Sensations begin as signals generated by touch receptors in your skin. They travel along sensory nerves made up of bundled fibers that connect to neurons in the spinal cord. Then signals move to the thalamus, which relays information to the rest of the brain. Next stop is the somatosensory cortex, where signals are translated into a touch perception.

The Neuroscience of Touch and Pain - BrainFacts

Bold, deeply insightful and biological to the core, with a warm and soothing touch of humanity.—Joaquín Fuster, author of *The Prefrontal Cortex* Engagingly written, *Touching a Nerve* takes the reader on a spellbinding journey into the workings of the human brain and the relevance of neuroscience to our daily lives. receptors in the skin known as the somatosensory system. This system is responsible for all the sensations we feel – cold, hot, smooth, rough, pressure, tickle, itch, pain, vibrations, and more.

Sense of Touch, Skin Receptors, Skin Sensations ...

So how does a quick journey from the touch receptors in your skin to your brain happen? When the touch, pain or heat sensors in your skin are stimulated, they send electrical pulses to your neurons, special cells that relay electrochemical impulses [source: A.D.A.M.]. The sensory neurons then act as a relay team, passing along the electrical pulse from neuron to neuron until it reaches your spinal cord.

How Touching Works | HowStuffWorks

Churchland appreciates that the brain-based understanding of the mind can unnerve even our greatest thinkers. At a conference she attended, a prominent philosopher cried out, "I hate the brain; I hate the brain!" But as Churchland shows, he need not feel this way.
