Training endurance is no exception. Many athletes fail to achieve real and long-lasting results because of poor planning, inadequate self-evaluation, and an incorrect mind-set rather than a lack of effort or motivation. Many endurance athletes train hard, but their training doesn't yield consistently positive results.

Building Better Habits for Triathlon Performance – Triathlete

As TriDot Triathlon often preaches, functional threshold (preferably in the form of TriDot scores) is the basis on which your training plan should be structured. You need to know your baseline capability in order to extrapolate what might be possible on race day.

How Many Hours of Triathlon Training Do You Need? – TriDot

By Erik Taylor. Competing in triathlon takes a toll on the body, and strength training is a great way to mitigate the wear and tear of the sport. Strength training can be done year round, including at the peak of racing season. The volume of swimming, biking and running that triathlon requires leaves little time for the gym, so triathletes should approach strength training conservatively.

7 Strength Exercises All Triathletes Should Do | ACTIVE

The triathlete may want to consider some combination of free weight exercises such as cleans, snatches, jerks, presses, squats, and deadlifts and bodyweight exercises for the purpose of building functional strength. Some bodyweight functional strength routines include isometric and bodyweight exercises and calisthenics.

Bodyweight Exercises Build Functional Strength For ...

Long-course racing requires long, steady efforts, so training often emphasizes strength and endurance. Off-road tri requires more anaerobic efforts to make it up short, steep climbs on the bike and run, for example. So the best "bang for your buck" training for long-course athletes making the switch to dirt is lactate tolerance training.

How Do I Take My Long-Course Know-How Off-Road? – Triathlete

Having a structured triathlon training plan is essential for triathletes of all ability levels. A well-designed training plan greatly increases the return you get on your training investment, and also reduces the risk of injury and overtraining. Many triathletes, especially beginners, base their training on plans they find on the internet that ...

How to design your own triathlon training plan

1. Too much too soon, such as a 10 to 20 percent increase in training volume over a three- to four-week period . 2. Frequently combining two harder variables in one training session (i.e. combining a long run with challenging hills or a tempo session with speed work) 3.

How to Tell When You're Over-Reaching or Over-Training ...

1. Transition season is the functional strength season. I am a big supporter of functional training throughout the season and recommend approaching it as 4th discipline, if you are a triathlete. Meaning, there is a periodized yearly plan for strength and condition training, with the transition period being the high-volume part of it.

Determine Your Goal Race-Day CTL to Plan Your Training. Once you have your race day CTL Target, subtract your current CTL from it to identify your required CTL gain, then divide that number by the number of weeks to race day to determine your weekly CTL gain. You now have overall and sport-specific weekly TSS targets to structure your training.

How to Use TSS to Prepare for IRONMAN
